How to Add a PlayPosit Bulb into D2L

1) Go to the module on D2L Contents page and into the module you would like to place the PlayPosit link. Then click on “Existing Activities”.

2) Click on “PlayPosit”.

3) Once the PlayPosit Setup screen pops up, click on “Set Bulb Link”.

4) Select your bulb you would like to add into D2L by clicking on the image icon. A menu should pop up. Click on “Set Bulb Link”.
5) A link window should pop up. Under the “Select Learner Experience”, select the learner experience related to the bulb. Then, select “Link”.

- Self-Paced: allows for learners to explore the bulb at their own pace asynchronously.
- Live Broadcast: will have learners explore the bulb synchronously as a class, where the instructor controls the pacing of the video. Students will respond to the projected questions on their own device. This option is more often used in a face-to-face classroom.
- Learner-made: asks students to be the instructor by making their own bulb, integrating questions throughout the video.

6) And you are done setting a bulb into your D2L course!
7) This example of adding a PlayPosit bulb is titled “Copy of Learning Anything – Khan Academy”.
